OFFICE ACTION

Restriction

1. This invention application contains claims directed to two (2) patentably distinct species:
Group A (1-8 & 10): A method for determining a dielectric layer thickness [class 438, subclass 11];
Group B (9): A method of manufacturing an electric device [class 438, subclass 763];
Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Applicant must choose either one of the species because of:

Group B compared to Group A: The electric device formation lacks at least the step of “depositing an electric charge onto the exposed surface ... determining an electrical parameter relating to the electric potential difference ...”

2. Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and must include an election of the invention to be examined even though the requirement is traversed (37CFR 1.143).
3. Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).
